mdintouch

Dragon® Medical Practice Edition 2 is a documentation solution that allows clinicians in busy practices to quickly document patient care directly in any Electronic Health Record. This new version offers improved accuracy and speed—the fastest and most accurate Dragon Medical Practice Edition ever, full support for regional accents, and 90 medical specialty vocabularies to choose from.

You can conveniently use your iPhone® or Android® as a microphone and an improved Hidden Dictation Box allows users to see their dictation appear transparently above their clinical system—so clinicians can dictate while looking at lab results, images or flow sheets. Dragon Medical Practice Edition can be easily deployed on any Windows-based device (Windows 8 compatible) with minimal involvement from IT for rapid implementation and deployment.
