## Complete speech-enabled clinical documentation solution for your practice

MDinTouch SR (Speech-Recognition) along with Dragon Medical allows Physicians to create, store, access and distribute their transcription-free clinical reports.

The MDinTouch platform provides Physicians with the flexibility to choose the documentation process that best meets their individual reporting needs: speech recognition and/or transcription.

### How It Works

Leveraging Dragon Medical's speech recognition engine, Physicians dictate into a fully customizable template, review, electronically sign and distribute the report all in one shot! Creating documents in this fashion results in the highest cost savings for your practice and provides immediate turn-around-time delivery to your referring facilities.

### MDinTouch QA Services

Our QA Services provide the added flexibility for Physicians that prefer to create a draft version of their report but don't have the time for review & corrections. Our Certified Quality Assurance Editors have the expertise to review & correct draft reports allowing Physicians to continue delivering patient care.

### Why Use MDinTouch SR?
